

Chamath Palihapitiya, Founder and CEO, Social Capital

Are you interested in decarbonization, sustainability and climate change and want to do something about it? I need help allocating a few \$B into these areas over the next 2-3 years so... I am turning to you for help. In return, you can work with me to implement it. Read on...

In 7 pages (or less) of single spaced prose, propose a framework we can use to buy and build technologies/companies/products that result in a holding company which can more meaningfully advance the efforts of decarbonization/climate change/sustainability.

The framework and process are more important than any one company or technology you may believe in *today* as I want this to be a strategy we can implement for decades.

Climate Change can be described as four interconnected layers: i) urban planning ii) analysis and measurement iii) remediation iv) governance. I would then describe how different technologies like sensors, kelp forests, drone reforestation and carbon credit marketplaces fit.

Please email submissions no later than 9am PST August 1. Any submissions later than this, in deck vs prose or greater than 7 pages will be immediately disqualified, no matter how good. We will pick three top finalists and I will publish their submissions.

Those three will then work together to refine their proposals into a holistic, integrated proposal. Each finalist will get \$25,000 for their efforts. After the process of integration, we will publish the final work and any/all of them will be offered a full time job.

This is open to EVERYONE around the world. We will work with you anywhere. Also, submissions should be PDFs and text should be Arial 11pt. One header no bigger than Arial 22pt. You can use graphics and images if you want.

You will work with me and my Partners to implement the strategy over the next several years. Please email submissions to climate@socialcapital.com Please forward this to any of your friends. You can work together as a team if you want. Good luck!!!!
